S 39-73 mph H 74-110 mph M > 110mph

Potential Track Area:

▭ Day 1-3 ▭ Day 4-5

Watches:

▭ Hurricane ▭ Trop.Storm

Warnings:

▭ Hurricane ▭ Trop.Storm

According to the National Weather Service, Tropical Storm Erika has dissipated into a trough of low pressure, with the remnants of the center located near the north coast of eastern Cuba. Remnants of the storm could still affect South Florida in the coming days with heavy rains, gusty winds, and the possibility of localized flooding, particularly in coastal and low lying areas due to King Tides which are running above predicted levels. Neighbors are advised to remain vigilant.

No further updates will be issued unless the storm regenerates.
